Patent No. 6500919
GENERAL INFORMATION:
APPLICANT: Adema, Gosse Jan; Figdor, Carl Gustav.
TITLE OF INVENTION: Melanoma associated antigenic polypeptide,
TITLE OF INVENTION: epitopes thereof and vaccine against melanoma.
NUMBER OF SEQUENCES: 38
                                                                                                                                                                                                     FILING DATE: February 15, INFORMATION FOR SEQ ID NO: 9:

                                                                                                                                                                                                                                       /note="Torgan: eye; Vector: pT7T3-Pac (Pharmacia) with a modified polylinker; Site 1: ECR I; Site 2: Not I; UI-E-CII is a normalized cDNA library containing the following tissue(s): RPE and Choroid. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site Double stranded CDNA was ligated to an ECOR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is ACCTA. This library was created for the program, Gene Discovery in the Visual System, supported by National Eye Institute (NEI)."

The library code designation was cs. For this library, cDNA inserts were cloned into the NotI/MluI sites of the vector. EST analysis was performed on the unamplified library at the NIH Intramural Sequencing Center (NISC)."

/note="Organ: Eye; Vector: pcMVSPORT6; Two different donor eyes (75-80 years old) yielded approximately 600 mg of dissected RPE/choroid tissue. This in turn yielded 340 ug of total RNA and 7 ug of mRNA. A directionally cloned cDNA library in the pcMVSPORT6 vector was constructed at Life Technologies (Rockville, MD; now part of Invitrogen Corp), essentially following the protocols of the SuperScript Plasmid System (Invitrogen Corp. chtp://www.invitrogen.com/>). The library code designation was cs. For this library, cDNA inserts were cloned into the NotI/Mus sites of the vector. EST analysis was performed on the unamplified library at the NII Intramural Sequencing Center (NISC)."
